

xRM Audit History

by CAPPISO

A complete solution for your Dynamics 365 CE

Overview

xRM Audit History is an add-on for your Dynamics 365 CRM system that monitors individual fields and logs every change made to them. With this add-on, you can guarantee the restoration of the original values

100 %
Data Protection

CHALLENGE

In your existing Dynamics CRM 365, it is not possible to document and restore field changes, export operations, or table and column changes. In the standard configuration of Audit History, only field changes can be logged so far.

SOLUTION

With the xRM Audit History solution, field changes or deletions of field values can be tracked and also restored. There is no need for a complete backup, which could result in the loss of entered data, but a complete restoration at individual field level is guaranteed. It is also possible to export or import changed (monitored fields) at any time
